Summary

Software Development Engineer at AWS with 4+ years of experience building distributed systems, protocol-level features, and AI-powered agents. Skilled in full-stack development and cloud infrastructure, with experience shipping features end-to-end for enterprise customers.

Experience

Amazon Web Services

Jan 2026 – Present

Software Development Engineer II, AWS Transform (Ingestion, Discovery & Migration)

Boston, MA

- Architecting AI-powered migration assessment agents using Strands Agents to automate VMware-to-AWS migration planning for enterprise customers
- Built EC2 compute agent that optimizes instance selection with CPU and memory rightsizing based on VM usage, pricing analysis, SQL and OS licensing cost calculations, and sustainability scoring
- Developed cloud economics agent with business value calculator tools and industry benchmarking data, enabling sales teams to quantify migration ROI for enterprise customers
- Designed agent evaluation framework with rubric-based quality thresholds, achieving 100% pass rate across 60 test scenarios

Amazon Web Services

July 2022 – December 2025

Software Development Engineer I, AWS Transfer Family (AS2 Protocol)

Santa Monica, CA

- Designed and implemented end-to-end AS2 file transfer recovery capability, enabling transfers to resume from network disconnections via partial S3 object fetching, supporting files of any size
- Built AWS B2B Data Interchange console from the ground up using React and Redux; became the team's frontend subject matter expert
- Shipped AI-powered Generative Mapping feature for EDI-to-JSON/XML transformation, reducing manual mapping time for customers by 80%
- Led 5 Drummond AS2 interoperability certifications (2023–2025), ensuring AWS AS2 compliance with industry standards across 21 trading partners
- Implemented connector-level throttling and per-second rate limiting, improving AS2 transfer reliability for high-throughput customers handling 1,000+ transactions per day
- Developed Static IP cell assignment for dedicated egress IPs and outbound self-signed TLS certificates, enabling enterprise customers with strict network security requirements
- Shipped 4 AS2 REST API features (preserve file name, enforce message signing, custom directories, content type preservation) with full CloudFormation support
- Designed end-to-end AS2 batch metering system to resolve billing record backlogs and support higher transaction throughput

Education

California State University, Northridge

December 2021

B.S. in Computer Science

GPA: 3.70

Skills

Languages: Java, JavaScript, TypeScript, Python, SQL

Frontend: React, Redux

Cloud: AWS CDK, CloudFormation, CloudWatch, DynamoDB, EC2, ECS Fargate, EventBridge, Lambda, OpenSearch, SQS, S3

Tools: Strands Agents, Git, Docker, Linux, MySQL, pytest, Jest, JUnit
